Making change with two coins

Suppose we have two coins – 5 cents and 7 cents. What total values can we make?

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- We can't make anything smaller than 5 cents
- We can make 5 cents
- We can't make 6 cents
- We can make 7 cents
- We can't make 8 cents
- We can't make 9 cents
- We can make 10 cents
- We can't make 11 cents
- We can make 12 cents

Suppose we have two coins – 5 cents and 7 cents. What total values can we make?

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Can we come up with an algorithm for this?

Suppose we have two coins – 5 cents and 7 cents. What total values can we make?

Let's define a boolean matrix called "Change" where Change[x] is true if and only if we can make change for x cents.

Shall we solve this recursively or by dynamic programming?

We can initialie the first 12 values using what we figured out before (i.e., for x = 1, 2, ..., 12 we already know the answers).

Now suppose we have figured out the correct values for Change[x] for all x = 1, 2, ..., N.

How do we figure out the correct value for Change[x + 1]?

We can initialie the first 12 values using what we figured out before (i.e., for x = 1, 2, ..., 12 we already know the answers).

Now suppose we have figured out the correct values for Change[x] for all x = 1, 2, ..., N.

Suppose we *can* make change for x cents. What would that look like, given that x > 12?

 Observation: The change would have to have at least one 5 cent coin or at least one 7 cent coin.

We can initialie the first 12 values using what we figured out before (i.e., for x = 1, 2, ..., 12 we already know the answers).

Now suppose we have figured out the correct values for Change[x] for all x = 1, 2, ..., N.

Suppose we *can* make change for x cents. What would that look like, given that x > 12?

 Observation: The change would have to have at least one 5 cent coin or at least one 7 cent coin.

So: if Change[x] is true, then at least one of Change[x - 7] and Change[x - 5] is true.

We can initialie the first 12 values using what we figured out before (i.e., for x = 1, 2, ..., 12 we already know the answers).

Now suppose we have figured out the correct values for Change[x] for all x = 1, 2, ..., N.

Suppose we could make change for x - 7 or x - 5 using 5 cent and 7 cent coins.

Then we could definitely make change for x cents by adding one of those coins!

Note that we can always make change for 0 cents (just give no coins).

Putting this together:

- Change[0] is true.
- Change[x] is false for x = 1, 2, 3, 4
- If x ≥ 5, then Change[x] is true if and only if at least one of Change[x - 7] or Change[x - 5] is true.

Also, we can use the calculation to figure out how to give change!

Class assignment:

- Calculate *Change*[x] for all x = 1, 2, ..., 25.
- What is the largest value for x for which you can make change?
- Harder: How do you make change for that value for x? (Hint: look at how you derived the "true" solution)

Making change

Questions:

- 1. How would you solve this problem for two arbitrary valued coins?
- 2. How would you solve this problem for three arbitrary valued coins?
- 3. How would you solve the problem of finding the smallest number of coins you need to make change for *x*, assuming you can make change?

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <
